Cialis Soft Tab 20mg Qty 10

Price per Unit (piece): \$59.99

Cialis Soft Tab

Is an oral lozenge, mint in flavor, containing pure Tadalafil Citrate that is placed under your tongue and dissolved. This method allows for the medicine to enter your blood stream much faster than digesting a pill. For men who need to wait 60 or 90 minutes when taking Cialis in a pill form, you can now experience results in 15 minutes or less when using a Soft Tab. This is enough time to keep your partner in the mood while the medicine is absorbed into your body. No more planning for sex hours in advance. With Soft Tabs you can be ready when your partner is ready.

Some men can get results from a usual Cialis pill (not Soft Tab) in about 40 minutes. For others it can take as long as 60 to 90 minutes as results vary per individual. When using a pill reaction time can also vary depending on what type of meal you have recently eaten. A meal high in saturated fat will increase the period of time a tadalafil citrate pill can be absorbed into the blood stream to begin its effect. However with Cialis Soft Tabs it doesn't matter what type of meal you have recently eaten because the medicine does not pass through your digestive system.

How to take

The Tadalafil Citrate has been given a mint flavour. The medications are known as sublingual Soft Tabs. Place these sublingual lozenges under the tongue and they will dissolve immediately.

The recommended starting dose is half of a 20 mg trochet (10 mg) before sexual activity. If the effect of this dose is too weak you may increase the dose to 20mg. We recommend you to take no more than one dose (10/20mg) per day.

Side Effects

Precaution

Taking Soft Tabs can cause your blood pressure to drop suddenly to an unsafe level if it is taken with certain

other medicines. You could get dizzy, faint, or have a heart attack or stroke.

Do NOT take Cialis if you take any medicines called nitrates. Nitrates are commonly used to treat angina. Angina is a symptom of heart disease and can cause pain in your chest, jaw, or down your arm.

Medicines called nitrates include nitroglycerin that is found in tablets, sprays, ointments, pastes, or patches. Nitrates can also be found in other medicines such as isosorbide dinitrate or isosorbide mononitrate. Some recreational drugs called "poppers" also contain nitrates, such as amyl nitrate and butyl nitrate. Do not take Cialis Soft Tabs if you are using these drugs. Ask your doctor or pharmacist if you are not sure if any of your medicines are nitrates.

Tell your doctor about all the medicines you take including prescription and non-prescription medicines, vitamins, and herbal supplements. Cialis Soft Tabs and other medicines may affect each other. Always check with your doctor before starting or stopping any medicines.

Don't drink alcohol in excess (to a level of intoxication) with Soft Tabs. This combination may increase your chances of getting dizzy or lowering your blood pressure.
